Food legislative status

Plettenberg, 23.4.2024

Dear Sir or Madam,

Concerning your request if the articles (see Annex 1) are in compliance with the current European legislation for food contact materials, we can give you the following answer:

1. Material description:

Plain aluminium

2. Legislative status

According to our supplier the mentioned article complies with the:

- Regulation No 1935/2004/EC of the European Parliament and of the Council of 27th of October 2004 on materials and articles intended to come into contact with food,
- Regulation 2023/2006/EC
- and DIN EN 602.

According to our supplier the article can be used at temperatures from -40 °C up to 250 °C (conventional oven). The article should not be exposed to direct flames.

Chemical stability:

Please be advised, that plain aluminium can be dissolved by acids, bases and/or metal salts in the presence of water and/or oxygen under formation of Al (III) salts. Be **advised** that the appropriateness of the product can only be determined by the specialised packer or manufacturer themselves.

3. Conclusions:

Based on the statements and material data sheets of our supplier we suggest that the delivered article (see Annex 1) is suitable to come into contact with food (restriction see point 2, Intended usage). Be **advised** that the appropriateness of the product can only be determined by the specialised packer or manufacturer themselves.

Best Regards

Novelis Deutschland GmbH
